

iVote — Full Feature Overview

QR-Based Feedback & Engagement Platform for Physical Venues

Prepared for marketing use — September 2026

1. What iVote Is

iVote turns any physical location — a restaurant table, a gym, a salon chair, a hotel room, an event entrance, a hospital waiting room — into a measurable feedback channel. A guest scans a single QR code, taps one answer, and the venue instantly sees what's working and what isn't. No app download, no account, no friction for the guest.

Core promise: *Turn every physical location into a measurable feedback channel.*

2. Who It's For

- Restaurants, cafés, and bars
- Gyms and fitness studios
- Salons and spas
- Hotels and hospitality venues
- Event organizers and conference operators
- Healthcare waiting rooms
- Retail locations
- Marketing/creative agencies (as a white-label offering to their own clients)

3. Core Feedback Experience

Feature	Marketing Angle
One-tap QR voting	Guests answer in under 5 seconds — no app, no login, works on any phone camera
Industry-specific templates	Ready-made question sets for restaurants, gyms, salons, healthcare, and events, each with a matching brand color — looks tailor-made from minute one
Custom branding per poll	Venue logo, brand name, and colors appear directly on the voting screen
Multi-language voting	Guests can translate the question and answers into 9 languages instantly — ideal for international guests and tourism-heavy venues
Flexible question types	Single-choice, multiple-choice, or open-ended "let people add their own answer"
Scheduled polls	Set a poll to open and close automatically — perfect for time-boxed events or promotions
Duplicate & reuse	Clone a winning poll or reuse an existing printed QR code for a new question — no reprinting needed

4. QR & Campaign Tools

Feature	Marketing Angle
Reusable QR codes	Print once, change the question anytime — the QR code itself never has to be reprinted
Trackable campaigns	Every QR placement (lobby, receipt, table tent, etc.) is measured separately, with scan-to-vote conversion rates
White-label welcome portals	Each QR code can show a fully branded welcome screen before voting — reinforces the venue's own brand, not iVote's
In-dashboard camera QR scanner	Admins can scan a printed code directly inside the app to instantly see and change what poll it points to
Bulk QR generation	Generate QR codes for 20 restaurant tables in one click, instead of one at a time
Rotating / recurring polls	A single printed QR code can automatically rotate through a set of polls daily or weekly — always fresh, zero admin effort
AI-generated poster backgrounds <i>(pending activation)</i>	Auto-generate a polished background image for printed QR posters from a text description
Embeddable website widget	Add a floating "Give Feedback" button to any website — extends iVote beyond physical QR codes into e-commerce and online businesses
Public "Trust Score" badge	An embeddable live score badge venues can put on their own website — every view is a subtle marketing impression for iVote

5. Feedback Intelligence & Recovery

Feature	Marketing Angle
Automatic alert rules	Get notified the moment a low score or a specific negative answer comes in — catch problems in real time, not in a monthly report
Vote-volume anomaly detection	The system watches for sudden drops in feedback volume and flags them automatically — an early warning system, not just a dashboard
AI sentiment tagging <i>(pending activation)</i>	Open-text answers are automatically classified as positive, neutral, or negative — turns raw comments into an instant "87% positive this week" summary
Benchmark reports	Compare a venue's own average score against an anonymized average from similar venues using the same question template
Feedback recovery workflow	Turn any alert into an assigned recovery task and track it through to resolution
Weekly email reports	An automatic Monday summary of poll activity, alerts, and recovery status, delivered straight to the manager's inbox
"We heard you" public updates	Venues can publicly post "We fixed the Wi-Fi you complained about" — visibly closing the feedback loop builds real guest trust

Private voter messages	Guests can send a direct private message to the venue while voting — a built-in, frictionless complaint channel that never has to go to a public review
-------------------------------	---

6. Engagement & Growth Tools

Feature	Marketing Angle
Post-vote rewards	Show a custom thank-you reward (message, discount code, and/or redemption link) after voting — turns feedback into a reason to come back
Reward redemption tracking	Staff can mark a reward code as redeemed and see a running count — proves the reward is actually driving repeat visits
Prize draws / raffles	Venues can run an opt-in prize draw tied to any poll, then pick a random winner with one click — a proven tactic to boost response rates
Smart review routing	Positive voters are guided to leave a public review; less-positive voters are kept in a private feedback loop instead
Opt-in lead capture	Guests can voluntarily leave their email for follow-up, with full explicit consent built into the flow
Automated lead nurture emails	Anyone who opts in gets an automatic personalized thank-you/follow-up email — no manual work required

7. Business, Team & Monetization Features

Feature	Marketing Angle
Multi-tenant secure workspaces	Every venue's data is fully isolated and access-controlled — enterprise-grade security from day one
Role-based team access	Owners, editors, and viewers — real teams can collaborate safely
Real email team invitations	Invite a colleague by email and they get their own secure login, not just a shared password
Three-tier subscription plans	Free, Starter, and Growth plans, fully wired to Stripe billing
Workspace webhooks	Push every new vote automatically into Slack, Zapier, Google Sheets, or any other tool a venue already uses
Developer API	Generate a secure API key and pull workspace data programmatically — supports larger, tech-savvy customers
CSV export	Full data portability for every poll's results
Audit log	Full history of administrative actions for accountability

8. Trust, Compliance & Platform Quality

Feature	Marketing Angle
Content moderation	Automatic filtering of political, religious, and sexual content in open-text answers, plus a guest-facing "report" option
Optional auto-delete of old votes	Venues can set a data retention window — a real compliance/privacy selling point for EU and enterprise buyers
Privacy, Terms, and Support pages	Full legal/compliance foundation already in place
Installable app (PWA)	iVote installs like a native app on any phone or desktop, with offline-friendly basics — no app store needed
Mobile-first, tab-organized dashboard	A clean, five-tab admin experience (Overview, Polls, Engagement, Feedback, Settings) designed to stay simple as features grow
Live error monitoring	Sentry-based monitoring ensures issues are caught proactively

9. What Makes iVote Different

1. **It's a two-way loop, not just a survey tool.** Rewards, prize draws, review routing, and public "we heard you" updates all close the loop back to the guest — most QR feedback tools stop at data collection.
2. **It's built for physical locations first.** Reusable QR codes, rotating polls, bulk QR generation, and location-level analytics are designed around real printed materials and real venues, not just online forms.
3. **It gets smarter over time.** Anomaly detection, AI sentiment tagging, and benchmark reports turn raw feedback into proactive insight instead of a spreadsheet someone has to read manually.
4. **It's already enterprise-shaped.** Multi-tenant security, team roles, an API, webhooks, and compliance controls are in place from day one — the platform can grow from a single café to a multi-location chain without being rebuilt.

10. Current Status (for internal marketing planning)

Live and working today: all features above except the two marked (*pending activation*), which are fully built in code and only waiting on an OpenAI API key to switch on.

Not yet built (roadmap candidates):

- Multi-location "chain" roll-up dashboard for franchises
- Agency/white-label reseller program
- Custom domains per venue
- SMS-based feedback (no QR needed)
- Native mobile app packaging
- Formal accessibility (WCAG) certification

This document was generated to support marketing content creation — website copy, sales one-pagers, social content, and pitch decks. All feature descriptions reflect the current, working state of the product.
